

# PatientTouch empowering better care

Welcome to the Future of Unified  
Clinical Communication and Workflows

**CONSOLIDATE YOUR WORK. SIMPLIFY YOUR DAY.  
IMPROVE CARE DELIVERY.**

PatientTouch® is the only care collaboration solution that improves productivity and clinical outcomes by unifying communication with clinical workflows in an enterprise-grade platform built to grow with your organization.

## Workflow-Driven Communication

PatientTouch consolidates text, talk, alerts and nurse calls with EMR data and clinical workflows all in one smartphone app. The frontline care team can communicate securely and share relevant patient and clinical data in-message, for more efficient, safer care.

### PATIENTTOUCH:

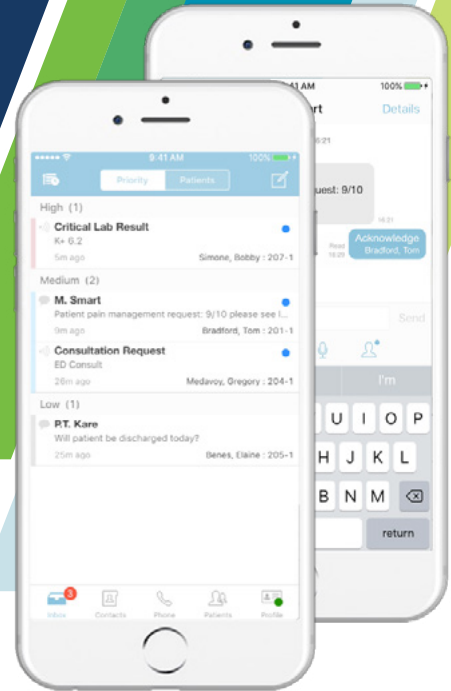

- **Includes patient, care team and clinical data in-message and in-workflow**, ensuring the right information is shared with the right person at the right time for safe, efficient care, while maintaining security and compliance.
- **Integrates with nurse call and alert systems** to drastically decrease noise and alarm fatigue. Assignment-based routing, alert escalation, and configurable alert behavior ensure the right clinician receives the right alert in the right way.
- **Streamlines communication and clinical decision-making** by providing the assigned care team one-touch access to real-time patient status, medications, lab results, vitals, and assessments within the PatientTouch app.

## Clinical Workflows

Because communication is always about delivering care, PatientTouch integrates Specimen Collection, Assessments, Rounding, Nursing Documentation and other critical workflows.

### OUR PLATFORM:

- **Ensures safe specimen collection** by enabling patient wristband scans and wireless label printing at the bedside. Real-time order notifications, documentation, and processing speed response times.
- **Enables mobile documentation** of high frequency, short duration assessments and procedures. Stay apprised of patient status with real-time documented interventions, such as vitals, pain assessments, and falls risk.
- **Allows you to schedule rounds** for patients, assign care team members, and track compliance. Reduce occurrence of hospital-acquired conditions (HACs), improve quality and patient satisfaction scores, and allow management of at-risk patient populations.

# The Power of PatientTouch

**INSIGHTFUL** — delivers relevant, real-time patient and clinical information via deep integration with EMR, clinical and IT infrastructure so care teams can confidently provide safe, quality care

**MOBILE** — accompanies the care team from bedside to bedside, within and outside the hospital

**EFFICIENT** — reduces device, application and vendor management costs for quicker ROI

**SMART** — role-based (from nurse to pharmacist to phlebotomist to physician), it streamlines workflows and accelerates decision making

## Empowering Better Results

### COMMUNICATION RESULTS

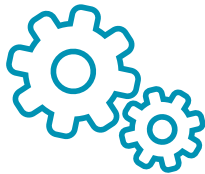

**86%** of users experience improved response times

**86%** of users feel more connected to the care team

**79%** of users see improved communication

### WORKFLOW RESULTS

**97%** average compliance across 80+ hospitals

**60** minutes per nurse per shift saved on documentation and coordination

**15%** improvement in HCAHPS per medication education to patients

*"PatientSafe has been fabulous to work with. The technology that they offer and how they offer it is really going to help us improve bedside nursing and clinical care. We are making clinicians more mobile and integrated, and saving them time.\*"*
