Beyond the Beeper: CLINICAL COMMUNICATION DESIGNED WITH PHYSICIANS IN MIND

Physicians Need A Unified Communication Solution

One of the biggest bottlenecks for care providers is the inability to connect rapidly to the right professionals when they need to. The current communication methods—pagers, smartphones, email—are slow, inefficient, and don’t allow for targeted and timely communication. Reliability is Critical

No matter how well-intentioned or promising a technology solution might seem, it won’t gain widespread adoption if it’s unreliable. Effective care collaboration relies on technology that can be trusted to connect care providers and patients. Communication Solutions Should Support Physician Workflow

Communication plays a crucial role in hindering or facilitating clinical communication. It impacts how easy it is for staff to get the information they need to efficiently and effectively collaborate on care. Burnout Hinders Collaboration

According to a recent study by Mayo Clinic, more than 90% of U.S. hospital-based physicians have at least one symptom of burnout. When physicians have reliable information at their fingertips, it helps improve care collaboration and communication. Training & Education Make All The Difference

Effective care collaboration relies on users knowing how to effectively leverage the technology they rely on to support their work. That means care system leaders and providers must work hand in hand. Beyond the Beeper...
