

# One App One Device

One Sustainable Solution

**PatientTouch. The only mobile platform that unifies clinical communication and workflow.**

PatientTouch consolidates secure messaging, voice calls, pages, critical alerts, nurse calls and clinical workflows including rounding, bedside handoff, specimen collection, assessments, Sepsis protocols, Antimicrobial Stewardship and more – in one mobile application on one device. PatientTouch streamlines communication and clinical decision-making by providing assigned care team members access to real-time patient status, medications, labs results, vitals, and assessments. Integrated with your directory, scheduling and on-call systems, PatientTouch ensures the right information gets to the right person at the right time for more efficient, safer care.

## Results:

**100%** reduction in barcode scanners

**100%** bedside specimen collections cross-labeled and cross-matched

**86%** of users see improved response times

**67%** of users experience fewer interruptions

**60%** decrease in medication administration errors

**15** seconds to reach the right care team member, down from 5 minutes,

**60** minute saved per nurse per shift
