

PatientTouch COVID-19 Screening Tool

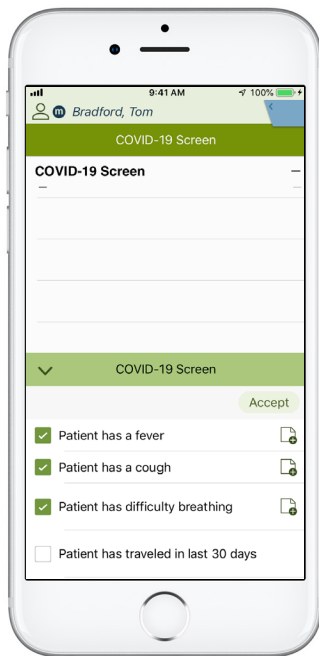

PatientSafe clients are responding to the emerging needs of COVID-19 by automating new mobile assessments and documentation to assist with critical workflow execution, improving care collaboration and allowing the care team to proactively resolve issues.

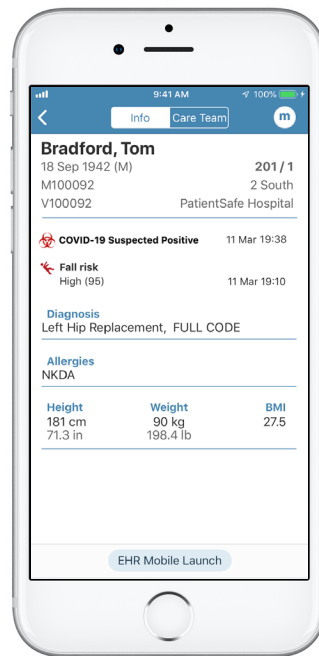

USE CASE

- Automatically assigns COVID-19 screenings and related interventions such as respiratory and ventilation assessments to nurses and respiratory therapists

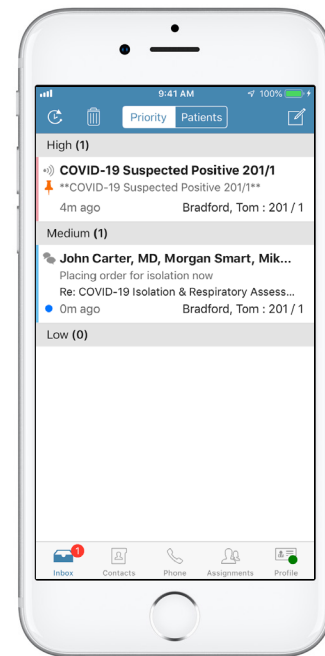

- In-app reminders improve compliance with COVID-19 screenings and related interventions
- Ensures COVID-19 risk assessments are performed at the patient's bedside with Positive Patient Identification (PPID) scanning
- Identifies problematic areas and measures performance of initiatives with real time dashboards
- Integrates risk assessment data into your organization's data repository and EMR

Simple Screening Assessment
